Quality Policy

The present policy aims to build a good business practice, its continuous improvement and its transformation into a competitive model. This allows achieving sustainable development of our customers' businesses, which in turn will provide an opportunity for a long-term and successful partnership.

We are convinced that our business depends entirely on the set goals and our ambitions for their achievement in implementing corporate standards of quality control and continuous risk management. The modern world offers us constant and dynamic changes in international practice and legislation, in technologies and logistics processes, changes in political issues and other challenges. This modern dynamics creates a number of risks that we strive to anticipate and manage (or turn into opportunities), which in turn gives us the aim to constantly improve our skills as a guarantee of the high level of services that we offer.

Sincerely,

lgor Matrosov Managing Director
